THE ART OF CONTEXT MANAGEMENT

Principles

- **AVAP: As Vibe As Possible**
- **ACAP: As Clear As Possible**
- **ASAP: As Short As Possible**
- **AAAP: As Auto As Possible (only when high confident)**
- **AVAP >> ACAP >> ASAP >> ATAP (auto is always the last option)**
- **ABTP: As Active As Possible (to Passive)**
- **SGB: Self-Generated is Better**

Actions

- **clear if possible (ASAP)**
- **manually composite if necessary (ASAP)**
- **revert is better than rectify(ACAP >> ASAP)**
- **slash commands >> output-style / sub-agents (ABTP)**
- **skill >> mcp (ABTP)**
- **meta-command, skills-creator (SGB)**

MY PRACTICE OF CONTEXT MANAGEMENT

- ``/init`` upon startup (ACAP)
- nested ``/init`` if necessary (ACAP)
- code-inspector: source code >> image recognition (ACAP + ASAP)
- Lovpen Sider: clear and short context (ACAP + ASAP + ABTP)
- thinking slash commands: manually control thinking depth (ABTP + SGB)
- ``/fix-until-no-error``: some error fixing is iterative (AAAP)
- ``/git-commit``: each unit feature needs commit (AAAP)
- [source code comparison + step debug \(ACAP + ASAP + ABTP\)](#)
- [2e revert if possible \(ACAP + ASAP + SGB\)](#)
